Immunology

Ingyu Bahng

May 2026

Contents

1 Immune System Players

Core Concept 1.1: Hematopoietic Stem Cells (HSCs) & Lineage

Core Concept 1.2: Lymphoid Lineage

Core Concept 1.3: Myeloid Lineage

Core Concept 1.4: Follicular Dendritic Cells

2 Immune System Organs

Core Concept 2.1: Primary Immune System Organs

Core Concept 2.2: Secondary Immune System Organs

Core Concept 2.3: Tertiary Immune System Organs

3 Innate Immunity Processes

3.1 Inflammation

Core Concept 3.1: Fever & The Local Response

Core Concept 3.2: Immune Cell Extravasation

3.2 Innate Pathogen Pattern Recognition

Core Concept 3.3: Pathogen Associated Molecular Patterns (PAMPs)

Core Concept 3.4: Pattern Recognition Receptors (PPRs)

3.3 NOX Complexes

Core Concept 3.5: NADPH Oxidase (NOX) Complxes

4 Antibodies

4.1 Immunoglobulin Structure & Isotypes

Core Concept 4.1: Immunoglobulin Structure

Core Concept 4.2: Immunoglobulin Isotypes (*H Chain Differences*)

4.2 B Cell Receptors

Core Concept 4.3: B Cell Receptors

4.3 Immunoglobulin: DNA to Expression/Secretion

Core Concept 4.4: Immunoglobulin: DNA to Expression/Secretion

4.4 Immunoglobulin Genetics

Core Concept 4.5: L Chain Gene Sequences

Core Concept 4.6: H Chain Gene Sequences

Core Concept 4.7: L/H Chain Gene Expression

Core Concept 4.8: RSS Joining Mechanism

4.5 Other

Core Concept 4.9: History: ***Edelman & Porter***

Core Concept 4.10: Haptens (*Small Antigens*)

Core Concept 4.11: Monoclonal Antibodies (mAb)

5 B Cells

5.1 Naive B Cell Development

Core Concept 5.1: Naive B Cell Development

5.2 B Cell Activation and Proliferation

5.2.1 Thymus Independent and Dependent B Cell Activation

Core Concept 5.2: Thymus Independent B Cell Activation

Core Concept 5.3: Thymus Dependent B Cell Activation

5.2.2 Antibody Development

Core Concept 5.4: Lymph Node Follicle Development

Core Concept 5.5: Affinity Maturation

Core Concept 5.6: Class Switching

5.2.3 Plasma vs Memory B Cells

Core Concept 5.7: Plasma Cells

Core Concept 5.8: Memory Cells

5.3 Leukemia & Lymphoma

Core Concept 5.9: Leukemia

Core Concept 5.10: Lymphoma

6 Complement System

6.1 MAC Complex Attack

Core Concept 6.1: MAC Complex Attack

6.2 Complement Pathways

Core Concept 6.2: Classical Pathway

Core Concept 6.3: Lectin Pathway

Core Concept 6.4: Alternative Pathway

Core Concept 6.5: Side Signal Pathways & Other

7 Major Histocompatibility Complex

7.1 MHC Structure & Genetics

Core Concept 7.1: MHC Characteristics

Core Concept 7.2: MHC Gene Sequences

Core Concept 7.3: MHC Mendalian Genetics

7.2 MHC Antigen Preparation

Core Concept 7.4: Endogenous MHC I (T_c Cells)

Core Concept 7.5: Exogenous MHC I / Cross Presentation (T_c Cells)

Core Concept 7.6: Exogenous MHC II

Core Concept 7.7: Exogenous CD1 MHC

8 T Cells

8.1 T Cell Receptor

8.1.1 TCR Complex Characteristics

Core Concept 8.1: αβ and γδ Receptors

Core Concept 8.2: γε and δε Heterodimers

Core Concept 8.3: ζζ or ζη Heterodimers

8.1.2 CD4 & CD8

Core Concept 8.4: CD4

Core Concept 8.5: CD8

8.1.3 TCR Genes and Rearragement

Core Concept 8.6: Gene Sequence and Receptor Overview

Core Concept 8.7: α Rearrangement

Core Concept 8.8: β Rearrangement

Core Concept 8.9: γ Rearrangement

Core Concept 8.10: δ Rearrangement

Core Concept 8.11: Subsequent Expression

Core Concept 8.12: History: *Hendrick and Davis*

8.2 T Cell Development

Core Concept 8.13: Developmental Pathway

8.3 TCR Antigen Response

Core Concept 8.14: Antigen Response Pathway

Core Concept 8.15: TCR Antigen Recognition to ZAP70

Core Concept 8.16: Lipid Rafts

9 Cytokines and Signals

9.1 Receptor Signaling Types

Core Concept 9.1: Immunoglobulin

Core Concept 9.2: Type I Receptors

Core Concept 9.3: Type II Receptors

Core Concept 9.4: Interleukin 17

Core Concept 9.5: Tumor Necrosis Factor

Core Concept 9.6: Chemokines

9.2 Immune Signaling Types & Themes

Core Concept 9.7: Immune Signaling Types

Core Concept 9.8: Signaling Themes

9.3 Cytokine Interaction Types

Core Concept 9.9: Cytokine Interaction Types

10 Inflammation

11 Tolerance

12 Autoimmunity

13 Hypersensitivity

14 Transplant Immunity

Rice University - Immunology - U1 - Innate Immunity and B Cell Function - U2 - Complement, MHC I and II, T Cells, and Cytokines - U3 - Inflammation, Tolerance, Autoimmunity - U4 - Dueling with Pathogens and Cancer
